

SPILL CONTAINMENT BARRELS

EMERGENCY USE ONLY!

This emergency spill response kit is intended for EMERGENCIES ONLY, not day to day small spill clean-up.

If needed, use the absorbent “snakes” to block spills from reaching storm water drains. Lay the absorbent pads over the spill and allow them time to soak up the spill completely. Then collect waste in plastic bags provided.

DO NOT put the contaminated pads, and snakes, bag in the spill containment barrel. Use the bags provided instead. Contaminated materials need to be disposed of properly, If unsure of proper procedure, please contact Nancy Martinez at the information provided below.

Please notify Gary Vigil, at Facilities & Operations, regarding spills of 5 gallons of liquids or more.

Report any usage of materials so they can be replaced and barrels can be ready for future use.
